Subject: Question on 2010 bathy report

Do you know what interpolation scheme and initial data set were used to generate the raster images in the report? (i.e., did GBA/AECOM use the raw bathy data, the 1x1, 3x3, or some other data; and which, presumably GIS-inbuilt interpolation scheme was used (or did they use something from Hypack or similar)? This is not specified in the report, can you find out and let me know please?

Another question for you, ETA of 2012 bathy? :) Can't wait!
